

## Issue: Batch Export Aborts

In the example below, the batch export of multiple students produced the following error message:

```
$! if f$mode() .eqs. "NETWORK" then EXIT
orauser.com: adding SERVER_3018471713 to LNM$FILE_DEV list.

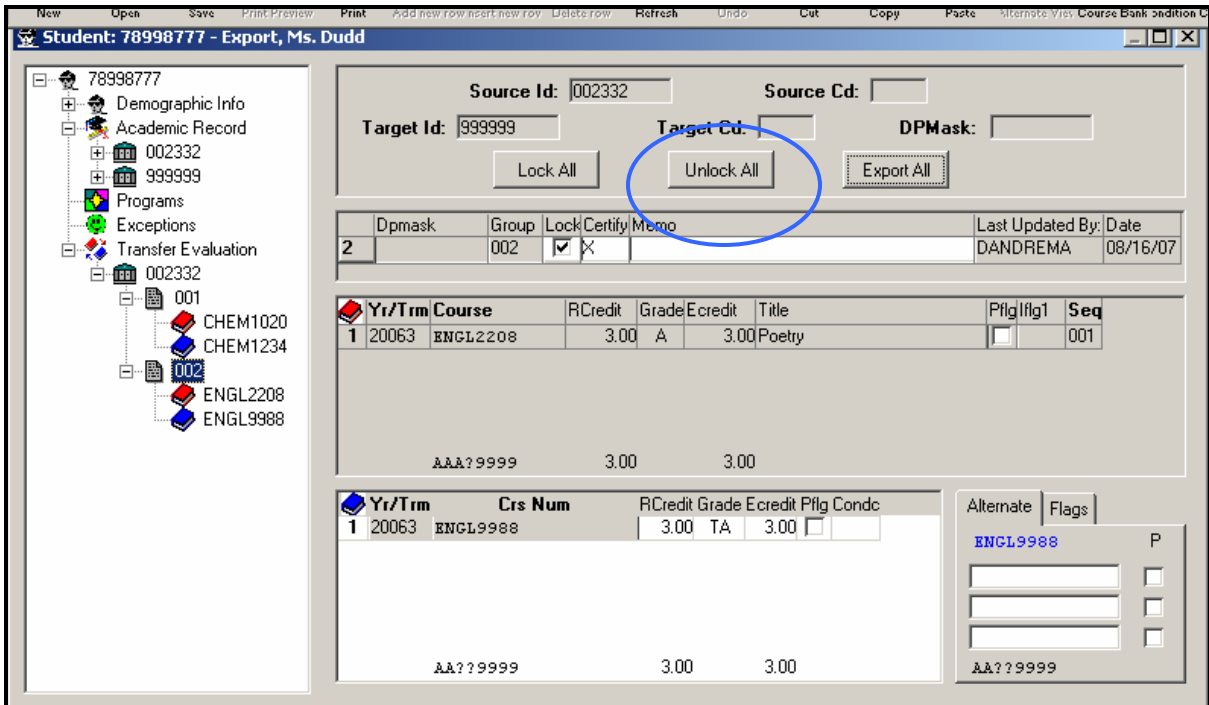

Starting the DARS 3.3.11 engine: 200708161000405300000
ENTERING DARS_MAIM: BEGIN
  Starting DA0003CP...
    Processing STUNO: 98798798
    Processing STUNO: 99988877
    Processing STUNO: 98989898
    Processing STUNO: 78998777
  ** TERMINATION MESSAGES **
  PROGRAM MODULE: DA0003CP  LOCATION: 715-update-ps-trsf-
  univ
  SQL error(s):
  SQLCODE:      -811

  %SQL-F-SELMORVAL, The result of a singleton select returned
  more than 1 value
  ** Program aborted.
  ENTERING DARS_MAIM: ABORT
  DARS engine aborted!
```

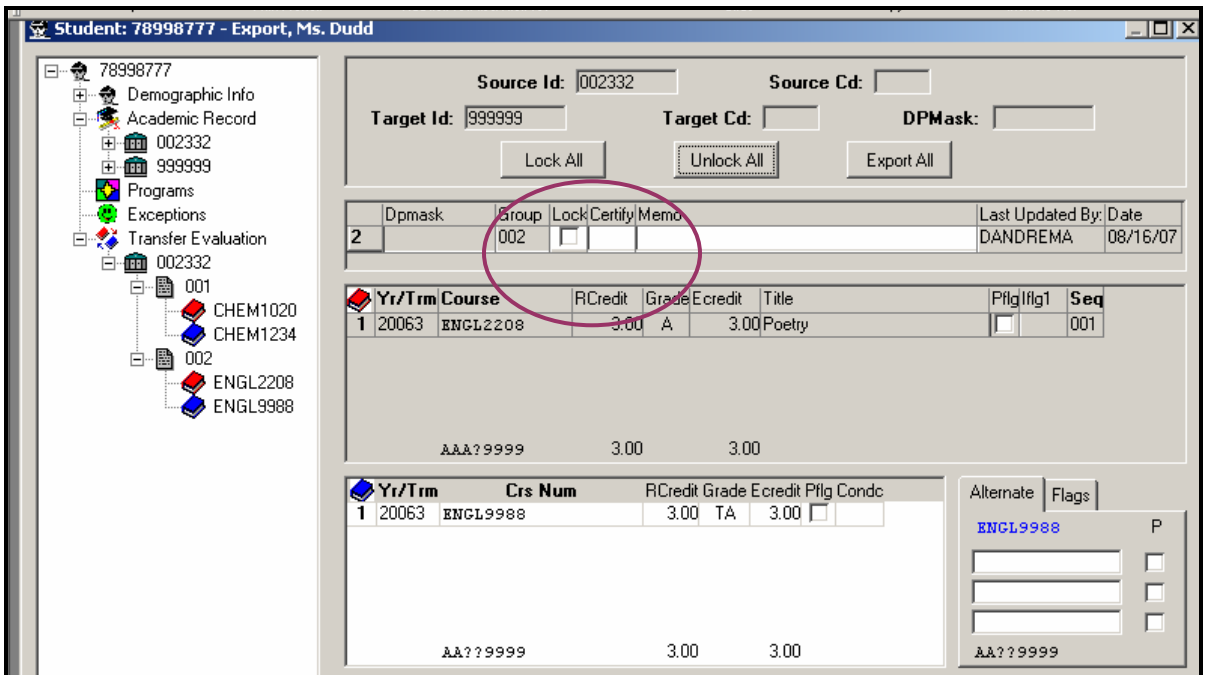

The export was aborted by the last student tech id before the "TERMINATION MESSAGES". In the example above: STUNO 78998777.

### Correction

In DARS, return to the student Academic Record.

Unlock All, which removes the Certify " X " .

Once you remove the certify request from the problem student record, and the student tech id from your batch, you may Export the remaining student records.

## Sleuthing

In order to successfully Export the student record, you need to determine the problem with the record.

You may want to ask these questions:

\*\*\*\*\* Does the problem student's transfer work for the export have an equal to, or less then, attempted YRTR date in ST1100UG, Education Tab?

Export cannot occur when the second academic record is equal to, or less then, the original record. If you attempted to Export this student alone, you would still abort. In a Batch export, with this situation, the entire Batch aborts.

\*\*\*\*\* Does the student have a duplicate record for the transfer institution on the ST1100UG, Education Tab?

Duplicate open Education Tab records will result in an Export abort. Remove one of the duplicate transfer institutions, and Export.
